REC_DS using C_Week 6_COD_Question 3

Attempt: 1 Total Mark: 10 Marks Obtained: 10

Section 1: Coding

1. Problem Statement

You are the lead developer of a text-processing application that assists writers in organizing their thoughts. One crucial feature is a charactersorting service that helps users highlight the most critical elements of their text.

To achieve this, you decide to enhance the service to sort characters in descending order using the Quick-Sort algorithm. Implement the algorithm to efficiently rearrange the characters, ensuring that it is sorted in descending order.

Input Format

The first line of the input consists of a positive integer value N, representing the number of characters to be sorted.

The second line of input consists of N space-separated lowercase alphabetical characters.

Output Format

The output displays the set of alphabetical characters, sorted in descending order.

Refer to the sample output for the formatting specifications.

Sample Test Case

```
Input: 5
a d g j k
    Output: k j g d a
    Answer
    #include <stdio.h>
    #include <string.h>
    void swap(char* a, char* b) {
      char temp = *a;
      *a = *b:
      *b = temp;
    int partition(char arr[], int low, int high) {
      char pivot = arr[high];
      int i = low - 1;
      for (int j = low; j < high; j++) {
         if (arr[i] > pivot) {
           j++;
           swap(&arr[i], &arr[j]);
         }
      swap(&arr[i + 1], &arr[high]);
      return i + 1;
    void quicksort(char arr[], int low, int high) {
   if (low < high) {
         int pi = partition(arr, low, high);
```

```

                                                                                  24,50,1026
         quicksort(arr, low, pi - 1);
        quicksort(arr, pi + 1, high);
     int main() {
       int n;
       scanf("%d", &n);
       char characters[n];
       for (int i = 0; i < n; i++) {
         char input;
characters[i] = input;
                                                                                  24,50,1026
                                                      24,50,1026
       quicksort(characters, 0, n - 1);
       for (int i = 0; i < n; i++) {
         printf("%c ", characters[i]);
       return 0;
                                                                                  241501026
     Status: Correct
                                                                           Marks: 10/10
